MULTISIG CAPITAL PARTNERS

INVESTMENT OBJECTIVE

The BTCR Bitcoin & Gold Rotation ETP seeks to achieve long-term capital growth through a systematic, rules-based rotation between physical Bitcoin and tokenized Gold.

The strategy dynamically allocates between the two assets based on a momentum/mean-reversion signal derived from the BTC/Gold price ratio. It aims to overweight the relatively undervalued/oversold asset and underweight the relatively overbought/overvalued asset over the medium to long term, while benefiting from their historically low correlation to improve risk-adjusted returns.

KEY FEATURES

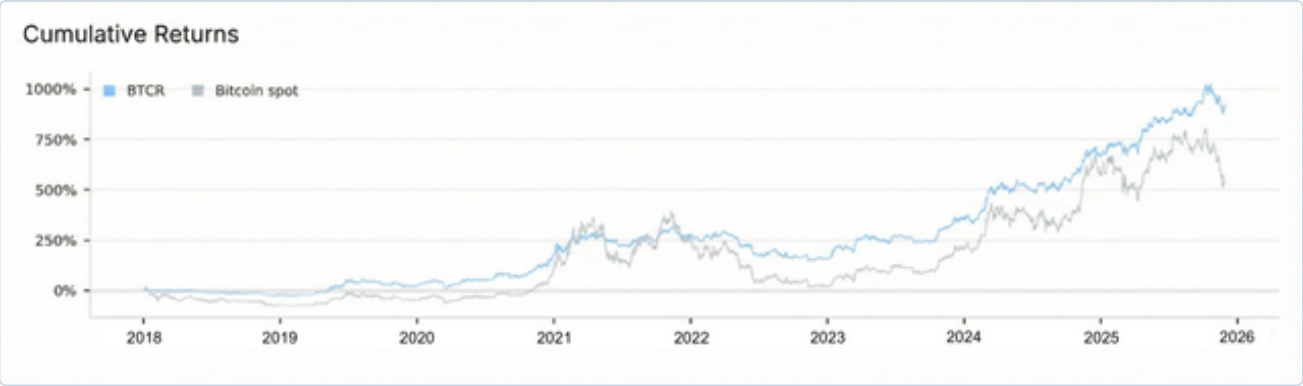
- **Rules-Based Monthly Rotation:** Systematic rebalancing based on smoothed RSI of the BTC/Gold ratio to tilt toward the relatively undervalued asset.
- **Tax Alpha:** Internal monthly rebalancing can help defer capital gains tax realization for investors in certain jurisdictions, supporting compound growth.
- **Diversification Benefit:** Capitalizes on the historically low-to-negative correlation between Bitcoin and Gold.
- **Physically Backed:** Full ownership of underlying spot assets (Bitcoin and Tokenized Gold in segregated onchain addresses), minimizing counterparty credit risk.

PRODUCT INFORMATION

Product Name	BTCR Bitcoin & Gold Rotation ETP
Issuer	Leverage Shares PLC
Underlying Security	Basket of Physical Bitcoin and Tokenized Gold
Strategy Tracked	BTC & Gold Rotation Strategy
Base Currency	USD
ISIN	TBD
Structure / Legal Form	ETP / Debt Security
Replication	Physical (Fully Replicated)
Countries Available	Switzerland, United Kingdom
Custodian	Licensed Crypto Custodian
Trustee	Apex Corporate Trustees (UK) Limited
Market Maker	BNP Paribas Arbitrage
Management Fee	0,99%
SIPP / ISA Eligible	Yes

Investors should refer to the Prospectus for a more complete description of the product, service providers and relevant regulatory factors. (www.leverageshares.com)

HISTORICAL PERFORMANCE OF THE STRATEGY



BTCR

Bitcoin & Gold Rotation ETP

Leverage Shares

MULTISIG CAPITAL PARTNERS

STRATEGY MECHANISM

The allocation is determined monthly using the Relative Strength Index (RSI) calculated on the BTC/Gold price ratio (Bitcoin priced in Gold units). The RSI is applied inversely:

- A high RSI on the BTC/Gold ratio indicates Bitcoin has become relatively overbought compared to Gold → the strategy gradually reduces Bitcoin exposure in favor of Gold.
- A low RSI on the BTC/Gold ratio indicates Bitcoin has become relatively oversold compared to Gold → the strategy gradually increases Bitcoin exposure.

To avoid premature rotations and allow participation in sustained trends, the monthly RSI value is smoothed to drive gradual monthly rebalancing toward the asset appearing more undervalued/oversold on a trend-adjusted basis. Rebalancing occurs once per month.

KEY RISKS

- Investors can lose the full value of their initial investment.
- **Volatility Risk:** Digital assets like Bitcoin are subject to extreme price fluctuations. The performance of this strategy may differ significantly from broader traditional markets.
- **Rotation Risk:** The momentum/mean-reversion approach using RSI on the ratio may lag or underperform during strong persistent trends in one asset, or produce whipsaw trades in range-bound markets.
